

PAPERLESS PRINT STREAMS Eliminating Bulky Reports

iDox is the ideal solution for managing the storage of reports, statements, invoices; virtually any document that originates as host-generated data. By storing information on inexpensive electronic media, iDox reduces and often eliminates the need to store reports on paper, micro film or microfiche. Among the most cost-justifiable of all document technologies, enterprise report management (ERM) saves money by reducing printing and storage costs, and increases productivity by streamlining filing and retrieval.

- Easy to Use
- Increase Search and Retrieval Performance
- Intuitive Interface
- Seamless iSynergy Integration
- Increase Accuracy
- Increase Data Storage and Retrieval
- Ensure Data Integrity

Scalable and Stable

iDox allows for identification of individual documents as separate objects within a print file, making these documents usable within business applications such as customer service or claims management. iSynergy's scalable document processing capabilities easily handle your ERM workload and allows for extremely flexible indexing. All documents are stored in the iSynergy application server and are only retrievable by authorized users.

Ease of Use

Designed to eliminate the need to learn sophisticated scripting or decipher complicated instructions, iDox provides you with an intuitive point and click setup system. From the setup system you can easily page text files, map ERM fields to iSynergy fields and even test your work before putting the applications into production. iDox's features are easily accessed through an icon-driven user interface.

Increase Productivity

iDox saves you time by allowing you to view reports in a database layout; turning static report data into valuable information. Powerful filter capabilities allow you to perform complex queries and sorts on data that can then be exported into spreadsheets or database applications for further analysis.

Industry Standard Report Formatting

Because reports generated by iDox are stored in PDF format, they are readily and easily accessible to the widest possible audience of computer users. Using the industry standard of PDF to create the reports allows users to manipulate, annotate, print, view, email, fax, etc., the captured information as needed.

Maximize Current IT Investments

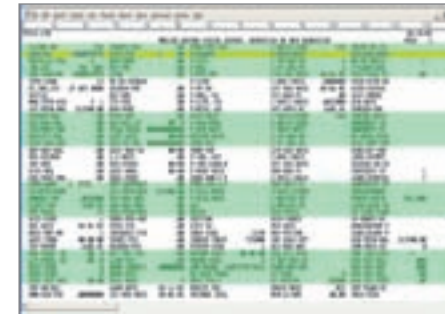

iDox protects and leverages your organization's technology investment by operating on Microsoft Windows and client servers. It employs industry-standard compression, networking and index database capabilities.

Highly Adaptable

iDox enables you to perform data extraction and integrate reports and statement content into your business applications. Developers can easily customize iDox to meet specific requirements.

Easy Integration

Designed to leverage your current IT investment, iDox integrates with the entire iSynergy product line.

Core Features

- Integrates seamlessly with the entire iSynergy Solutions Suite.
- Transfer statements and reports to magnetic or optical disk without printing, scanning or rekeying them.
- Maximize response times during prime business hours by running iSynergy ERM functions as background tasks after hours.
- Industry-standard compression, networking, optical storage and index databases.
- View on screen an identical copy of the original plain text, green bar or document.
- Enables customization to your business environment through point-and-click configuration, without programming.
- Index information on reports and statements can be automatically read during the import process.
- Offers column indexing to increase search and retrieval performance when searching for strings such as account numbers, loan numbers, invoice numbers and names within large documents (10,000+ pages).
- Incorporates powerful cross-referencing to other COLD, image or application documents.
- Provides the capability to poll or schedule COLD jobs.
- Full ANSI and ASCII line printer support.
- Flexible paging and document breaking algorithms ensure you are able to process all of your line-of-business documents.
